

# Manage · Analyze · Plan · Configure

## IBM Power and Linux on Power Systems™

Competitive Infrastructure Analysis (Oracle®, HP® and X86)

Single Interface - All Platforms

With MPG's Navigator Family®

**Manage** the collection of HISTORICAL performance data for all operating systems supported by IBM Power and Linux on Power Systems.

**Analyze** the historical data for complex CPU, memory and disk reports in HTML output for one partition, the whole frame, or the entire Enterprise using MPG's exclusive **Power Analytics** menu.

**Plan** and **Configure** upgrades, server consolidations, LPAR configurations and competitive migrations using MPG Navigator Family's powerful What-IF® capacity planning feature. Workloads from any or all servers can be combined and modeled to any IBM Power or Linux on Power Systems.

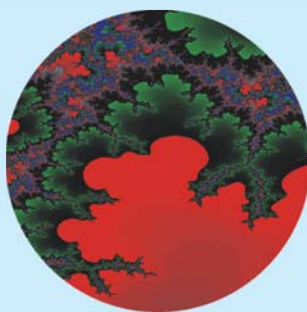

Take advantage of what IBM and 125+ IBM business partners already know ...

MPG's Navigator Family is **THE** preferred method of capacity planning.

Our products are trusted for over 2,000 capacity plans per year.

**Download a FREE trial.**
